14.1 WELLS

The permittee shall (at the permittee's expense) provide well monitoring data monthly and the total annual groundwater pumped. Data requested shall include, but not necessarily be limited to, water extraction volumes and static well levels. Water usage shall be minimized by use of best available control technology and best water management conservation practices.

- a. No new on-site or off-site water sources, including but not limited to wells, imported water, new ponds/reservoir(s) or other surface water impoundments, or use of an existing pond shall be permitted without additional environmental review and may be

subject to a modification to this use permit. A new Water Availability Analysis shall be required prior to approval of any new water source(s) on the property.

- b. All monitoring shall commence within six months of the issuance of the use permit, or immediately upon commencement of the winery use, whichever occurs first and shall be submitted annually thereafter.
- c. The monitoring required by these conditions shall verify that the water use assumptions and the actual water use are consistent with the usage and assumptions analyzed in the Water Availability Analysis prepared by Ludhorff & Scalmanini Consulting Engineers dated March 19, 2015, (the "WAA"). If the actual water usage is greater than what was assumed in the WAA, the report shall analyze whether the increased water usage is likely to have potential impacts and whether it results in the annual water allocation of 39.6 af/yr in normal years and 27.72 af/yr in dry years (dry years are defined as 70% or less of normal rainfall) for the project being exceeded. If the annual water allocation is exceeded, the report shall recommend ways in which water usage can be reduced so as not to exceed the allocation the following year. All recommendations shall be immediately implemented to the satisfaction of the PBES Director.
- d. If after two years of reporting the monitoring shows that the annual water allocation identified above continues to be exceeded, this use permit shall be scheduled for review by the Planning Commission and possible modification, revocation or suspension.
- e. Groundwater pumping shall not exceed 39.6 af/yr in normal years and 27.72 af/yr in dry years.

Exterior winery equipment shall be enclosed or muffled and maintained so as not to create a noise disturbance in accordance with the County Code.
